

Teca® Cu

The systemic defense inducer that prevents and corrects the symptoms of Copper (Cu) deficiency in the plant.

Teca[®] Cu is a systemic defence inducer developed to activate the plant's natural defence mechanisms. It also has a mixture of microelements rich in copper (Cu).

The formula is composed of natural substances which boost your crops' defences. For example, it activates specific enzymatic processes such as the production of phytoalexins and lignin synthesis, improving the healing of plants after pruning or adverse weather conditions. Additionally, thanks to the fact that all the Cu in its formula is 100% assimilable, **Teca[®] Cu** prevents and corrects Cu deficiency symptoms.

Teca[®] Cu was the first defence inducer developed by Grupo lñesta, and it has a significant international market presence. The trust our customers have placed in us is a testament to its results.

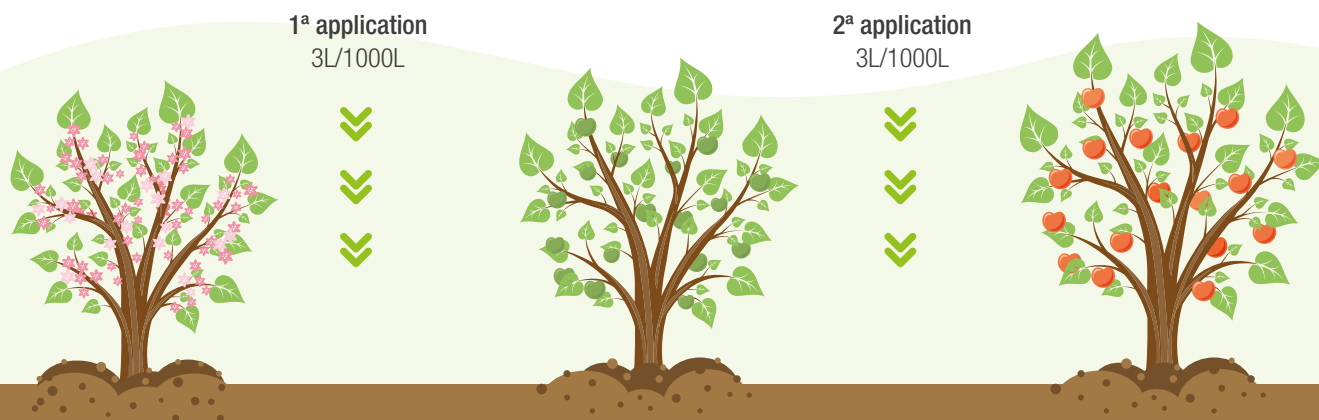

BENEFITS

- ✓ Active enzymes involved in lignin synthesis
- ✓ Necessary for photosynthesis
- ✓ Prevents necrosis of new leaves
- ✓ Corrects copper deficiencies
- ✓ Compatible with common protection programmes

VALID FOR ANY TYPE OF CROP

EVOLUTION CYCLE
