

Teca® PLUS

High biostimulant power for all early stages of cultivation. Effective in seed treatment to enhance germination.

Teca[®] PLUS is a broad-spectrum biostimulant formulated with plant-based free L-amino acids and other bioactivating substances that make it a key player. These substances include algae extracts, vitamins, oligosaccharides and fulvic acids.

DIFFERENTIAL ADVANTAGES

Can be combined with fungicides, herbicides, etc.

Guarantees harvest increase (especially extensive harvest) and simplifies fertiliser programmes.

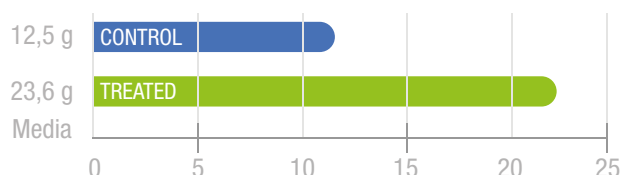

Recommended for the entire cultivation cycle, especially in the early stages, including seed treatment.

It is a systemic biostimulant, so a foliar application helps rooting and stimulates vegetative development as well as the crop's general condition.

TRIAL

Application of **Teca[®] PLUS** in garlic crops, aimed at improving nutrient absorption capacity to achieve healthier and more vigorous crops.

Garlic, weighed after 58 days with 1 application at 2.5L/Ha

CONTROL

TREATED

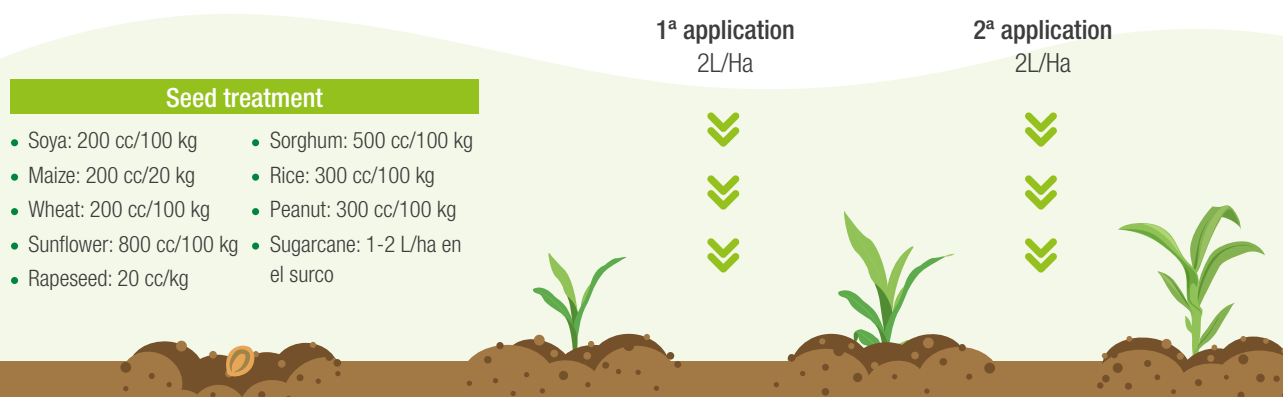

BENEFITS

- ✓ Improves early-stage plant development.
- ✓ Improves early-stage rooting via foliar application.
- ✓ Seed treatment improves germination, emergence, and crop implantation rates.
- ✓ It helps the plant withstand transplanting stress, improving its viability.

VALID FOR ANY TYPE OF CROP
