

Teca® ROOT

It stimulates root development and enhances the development of secondary roots, improving the plant's ability to take up water and nutrients from the soil.

Teca[®] ROOT is the most complete root system biostimulant, allowing the crop to reach its maximum potential development and yield.

Teca[®] ROOT stimulates root growth and enhances the formation of secondary roots, increasing the number of absorbent hairs and achieving better water and nutrient absorption. Also favours the development of bacteria which inhabit the rhizosphere and positively affect plant development.

The product formula contains free L-amino acids, algae extracts, microelements and natural extracts specially selected for their great rooting power.

TRIAL

PHOTOGRAPHS TAKEN ON THE SAME DAY

Application of a single product dose of 5L/ha and installation of root traps. Roots are measured after 60 days.

BENEFITS

Stimulates the roots helping them to become healthy and vigorous.

Ensures crop implantation during transplantations and after plant emergence.

Boosts production because of greater root mass, which increases the number of productive branches.

Stimulates the formation of secondary roots by increasing the number of absorbent hairs.

Zero-waste product: guarantee of short-term and long-term non-contamination of soil.

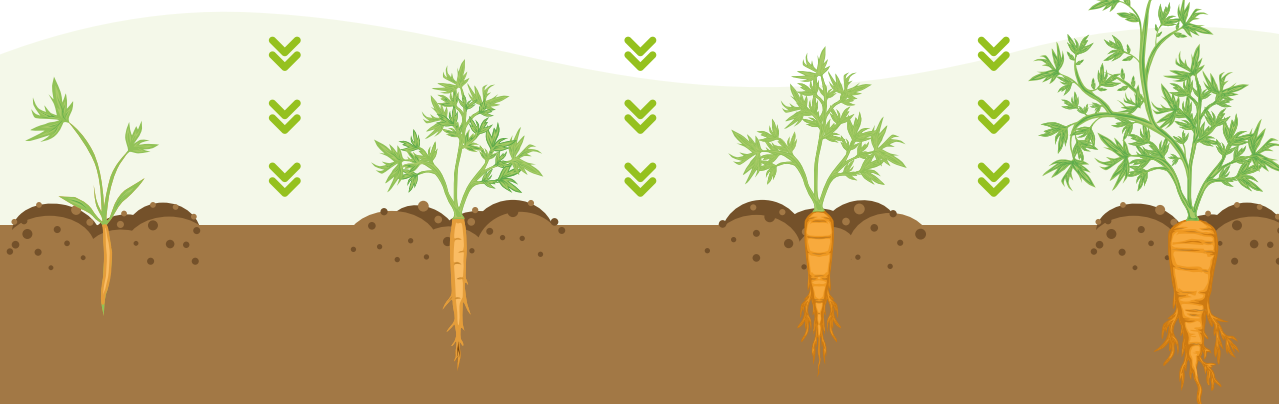

Favours the development of bacteria that inhabit the rhizosphere and that have a positive impact on plant development.

EVOLUTION CYCLE

1^a application
2,5L/Ha

2^a application
2,5L/Ha

3^a application
2,5L/Ha

Applied doses are indicative. For more detailed information, please contact your sales agent.
