

Teca® FRUIT

Multilateral activation of all the mechanisms involved in fruit ripening to increase the yield and quality of your harvest.

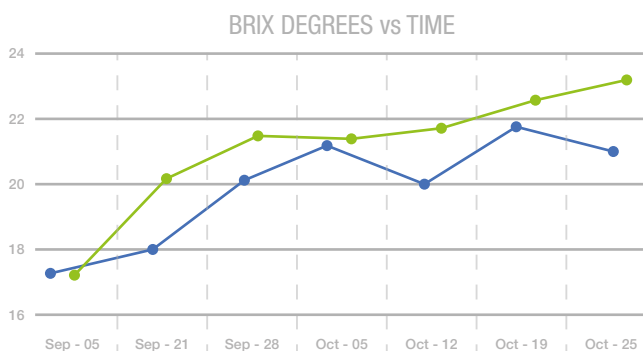

Teca[®] FRUIT is a highly effective biostimulant designed to improve fruit ripening, fattening and quality, significantly enhancing its organoleptic qualities such as colour, texture, smell, and flavour.

Its exclusive formula is rich in potassium, free L-amino acids, cyclic polyols, algae extracts and other key substances which trigger a multilateral biochemical stimulation: different pathways are activated in a balanced way and 100% naturally.

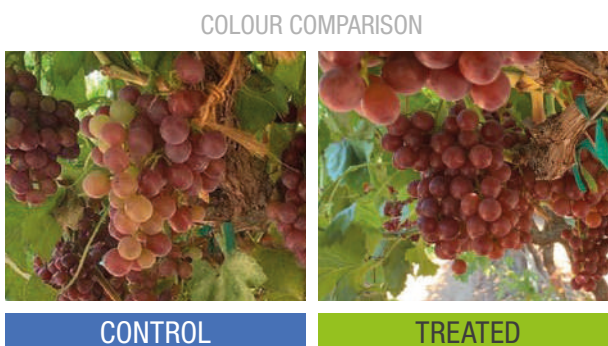

They complement the fruit ripening and fattening processes, from nutrient mobilisation to gene activation.

TRIAL

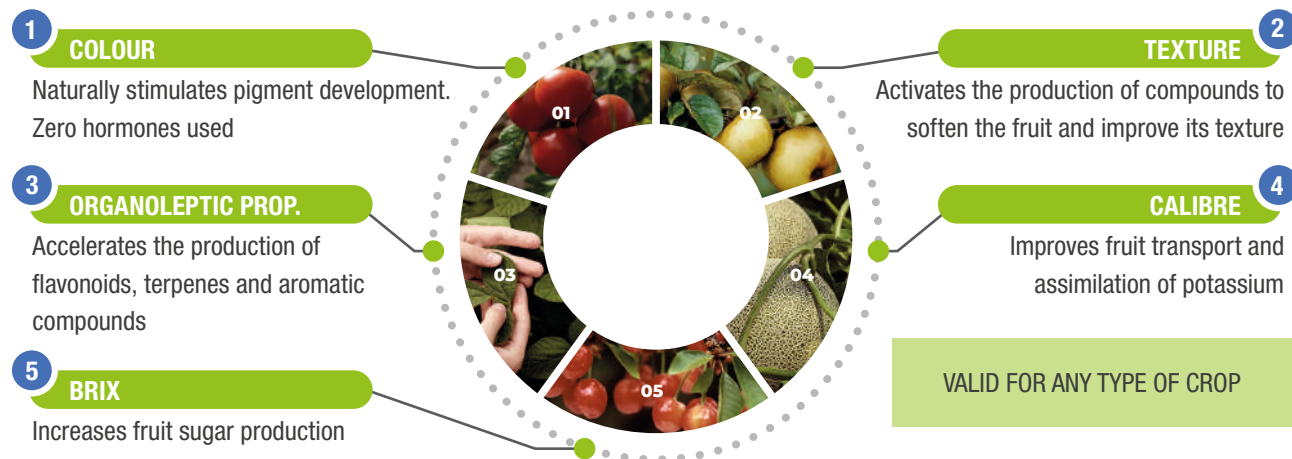

Trial 1: Red wine grape variety in California.

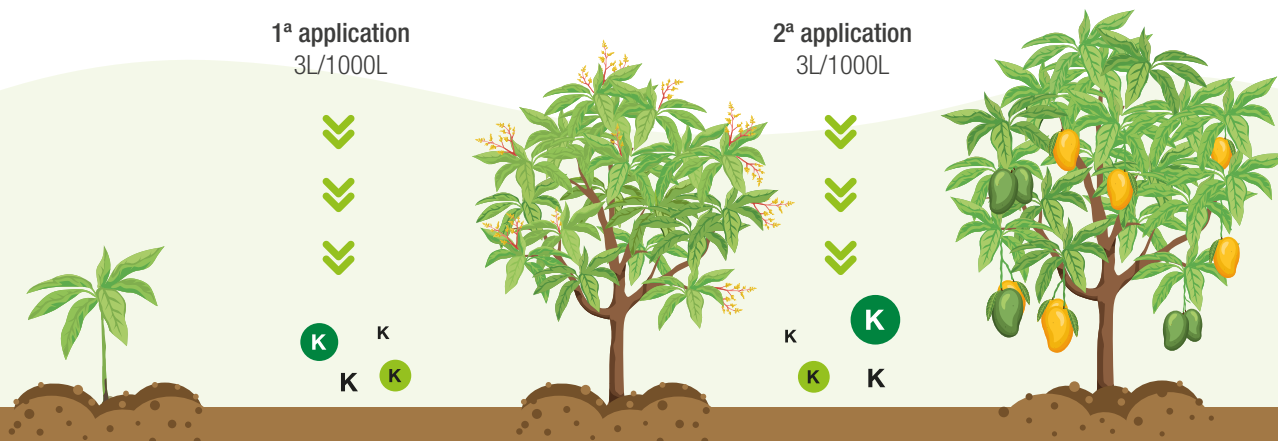

Trial 2: Table grape variety in California.

BENEFITS

EVOLUTION CYCLE
